

Rubén Miguel Marnez

IT Infrastructure Administrator | Windows and Linux Servers

Mexico City, Iztacalco | Tel. +52 56 53 52 71 39 | Email: rubenmiguelmarnez@hotmail.com

Github: <https://nestormh2050.github.io/Rubenmm.github.io/>

PROFESSIONAL SUMMARY

Computer Science Engineer (IPN) specializing in advanced management and financial optimization of global technology infrastructure. Proven experience in critical migration of enterprise servers, restructuring of distributed database schemas, and consolidation of centralized storage. Strategic capabilities for network design and Disaster Recovery Plans (DRPs) for perimeter systems under international security standards within Azure Cloud.

SKILLS

- **Core & Windows Server Infrastructure:** Advanced administration of identity services in Active Directory corporate, NTFS access and storage policy management, design of essential network services (DNS, DHCP) for IIS web servers.
- **Linux System Administration:** Advanced management of corporate environments (Red Hat, Ubuntu, CentOS) through an interface Command line interface (CLI); task automation, secure access control (permissions/properties).
- **Virtualization & Hybrid Environments:** Provisioning, sizing of enterprise virtualized infrastructure using VMware, Hyper-V, managing the lifecycle of resources (strategic cloning, snapshots and load balancing).
- **Monitoring:** Design of centralized monitoring architectures and deployment of business analytics dashboards and Real-time infrastructure using Grafana, Power BI, and Apache Superset for proactive incident prevention. IT Operations Management (ITSM): Management of the complete lifecycle of Level 2 and 3 complex incident and problem management under the ITIL framework; implementation of building management tools (Jira , ServiceNow), strict service level agreements (SLAs), and design of operational continuity plans; and use of Docker and Kubernetes for DevOps and cloud.
- **Data Engineering & Architecture:** Administration, optimization and maintenance of distributed, relational and NoSQL enterprise database engines (PostgreSQL, MS SQL Server 2019-2025, Oracle 11g, MySQL, MongoDB, MariaDB).

PROFESSIONAL EXPERIENCE

Himex Customs Agency | Senior Systems Administrator | Specialist in Windows, Linux, and Cloud Servers | June 2024 – July 2026

- **Hybrid Environment Management:** Management and optimization of mission-critical platforms based on Windows Server (Ace Directory, IIS) and Linux distributions (Ubuntu, CentOS, RHEL), ensuring high stability and strict compliance with corporate service levels (SLAs) and AWS, Azure and GCP environments.
- **Indicators & Executive Reports:** Development of key performance indicators (KPIs) and executive reports of the Technological operations, facilitating strategic visibility into the availability, health, and resource consumption of the entire infrastructure for management decision-making.
- **Support & Standardization Coordination:** Direction and coordination of first and second-level technical support, proactively identifying opportunities for improvement and leading the standardization of support processes under best practices.
- **Proactive Monitoring:** Design and implementation using Grafana and Datadog, achieving continuous monitoring of metrics Health monitoring (CPU, RAM, storage) for timely detection and anticipation of server failures. Business Continuity & Resilience (DRP): Design, implementation, and testing of robust backup policies and disaster recovery plans, ensuring data integrity, systematic verification, and timely restoration.
- **Security & Vulnerability Management:** Management of the patching cycle and critical updates using centralized tools in Windows and Linux environments, structuring strategic maintenance windows to ensure zero impact on the business.
- **Software Asset Management (SAM):** Comprehensive management of corporate licensing (for more than 200 endpoints), controlling the centralized deployment of productivity suites (M365), design tools (Acrobat Pro), cybersecurity software (Anvirus/EDR) and secure connection tunnels (VPNs).

- **Operations Management:** Design and implementation of the centralized service desk for incident management and technical requirements of the hospital infrastructure, establishing strict Service Level Agreements (SLAs) and Disaster Recovery Plans (DRPs) to guarantee business continuity.
- **Data Infrastructure Migration:** Planning and execution of the platform change for databases Enterprise environments, migrating Oracle 11g environments on Linux servers (Ubuntu/Red Hat) to modern Microsoft SQL Server 2019 Standard and Windows Server 2019 architectures, ensuring complete data integrity and zero data loss. **Server Lifecycle :** Comprehensive oversight of the provisioning, installation, hardening, and performance *tuning* cycle of mission-critical data servers, implementing telemetry layers and automated infrastructure monitoring for failure prevention.
- **Data Migration Strategy (ETL):** Management of the critical large-scale data migration for the hospital system (HIS ISSEMYM Toluca), executing the precise extraction, transformation and loading (ETL) of more than 100,000,000 historical clinical records to 28 active modules without affecting operational availability.

Mexican Center for Philanthropy AC (CEMEFI) | Director of IT Infrastructure and Operations | March 2003 – October 2021

- **Critical Platform Architecture:** Strategic direction of the technological infrastructure that supported the for 18 years digital ecosystem of the ESR System at the national level, guaranteeing the high availability of servers and SQL Server databases for the massive processing and automated delivery of business diagnostics.
- **Global Infrastructure Design:** Design and management of the institution's corporate technology architecture, Managing end-to-end networks with IP routing, IP telephony (Cisco/Avaya), biometric perimeter access control, and network perimeter security.
- **Cloud Migration and Integration:** Planning and execution of the technological transition of local (On-premises) collaboration services to Cloud environments using Microsoft Azure and Microsoft 365 with Exchange Cloud, drastically increasing the resilience and availability of institutional email.
- **Hybrid Infrastructure Management:** Management and maintenance of a hybrid ecosystem comprised of more than 15 local physical servers and 10 virtual servers in the cloud (Azure), optimizing physical and virtual performance for the continuity of the organization's various programs. • **IT Asset Management (ITAM):** Strategic control of the corporate hardware and software lifecycle; encompassing the administration and provisioning of physical inventories (servers, desktops and laptops) as well as the governance and compliance of enterprise licensing (M365, Adobe, cybersecurity and VPNs).

EDUCATION

National Polytechnic Institute (IPN) - UPIICSA Bachelor's Degree in Computer Science

CERTIFICATIONS AND COURSES

Official Certifications:

- PostgreSQL Database Administration, 2025.
- Microsoft Azure Fundamentals AZ-900, 2026.
- Microsoft Dynamics CRM, SharePoint and Exchange Server.
- Windows Server Administration and SQL Server Management.

Technical Courses and Specializations:

- Infrastructure: Windows Servers, Linux Servers (Red Hat, Open Suse, Ubuntu, CentOS).
- Server Administrator: Hosting, Cloud, WordPress, Infrastructure, Storage Administrator (NAS).
- Specialization Courses: Applied Artificial Intelligence, Virtualization, Linux Red Hat Enterprise, Microsoft Power BI Advanced, Dashboarding with Grafana, Cisco Firewall & Network Security, Python Language.
- Business Management Systems: ERP Consultant Odoo, CRM Microsoft Dynamics 365.
- Artificial Intelligence: Google Gemini, MicrosoN Copilot, Claude, ChatGPT.

LANGUAGES

- Spanish: Navo.
- English: B2 (Upper-Intermediate) - Technical reading, writing and business speaking.
